

LINEX STUDIOS — Creative Intelligence Studio

Digital Headquarters: Creative Blueprint & Design System PRD (v2)

Companion document to: `LINEX_STUDIOS_Website_PRD.md` **Positioning update:** *Creative Intelligence Studio* (AI Commercial Production · AI Advertising · Brand Strategy · Digital Growth · Performance Marketing · Automation · Creative Technology)

Note on scope: The first PRD already covers the full sitemap, page-by-page specs, SEO system, and content strategy in detail. This document does **not** repeat that work. It focuses on what's new in this brief: (1) the refined "Creative Intelligence Studio" positioning and two new services — Creative Strategy and CRM/Automation, (2) a full text-based homepage wireframe with headline/subhead/copy/media/interaction/CTA for every section, (3) a complete visual design system (typography, spacing, grid, color, cards, buttons, iconography, illustration, video style), and (4) a "why this architecture wins" strategic rationale. Where the sitemap or a page spec is referenced, it points back to the companion PRD rather than duplicating it — treat the two documents as one system.

0. What changed from v1, and why

The earlier brief positioned LINEX as an "AI Commercial Studio + Growth Partner." This brief reframes it as a "Creative Intelligence Studio." The difference matters and should be reflected everywhere:

- **v1 framing** leads with production speed and growth metrics — appeals most to performance-minded buyers (Marketing Heads, D2C growth teams).
- **v2 framing** leads with *intelligence applied to creativity* — a broader, more premium, more defensible category. It positions LINEX above "AI video vendor" and above "digital marketing agency" simultaneously — the studio that thinks, not just produces.

Recommendation: Use "Creative Intelligence Studio" as the standing subhead/category tag sitewide (replacing "AI Commercial Studio + Growth Partner" from v1), and fold **Creative Strategy** in as a first-class flagship service (not a footnote) since it's the philosophical anchor of the new positioning. Add **Automation** and **CRM** as a new service pairing under the Digital Marketing hub — this is what lets LINEX plausibly claim "growth partner," not just "creative vendor," since automation/CRM is where creative output turns into a compounding system.

Updated tagline options (Creative Intelligence framing)

1. "Where creativity meets intelligence."
2. "The studio that thinks before it generates."
3. "Creative work, engineered."
4. "Intelligence, applied to imagination."

5. "Not an agency. A creative intelligence system."

Recommended primary: "Where creativity meets intelligence." — paired with the standing category tag "Creative Intelligence Studio."

1. Updated Service Set (deltas from v1 PRD)

The v1 sitemap stands, with these additions/renames:

- **Add flagship service:** `/services/creative-strategy` (elevated from "Creative Direction" — broader: brand positioning + campaign strategy + creative direction combined)
- **Add to Digital Marketing hub:** `/services/automation` and `/services/crm` (new hub siblings alongside Google Ads, Analytics, CRO, SEO, GEO, AEO)
 - **Automation** — workflow/marketing automation (email/WhatsApp sequences, lifecycle triggers, ops automation connecting ad platforms → CRM → fulfillment)
 - **CRM** — CRM setup, pipeline design, lead scoring, sales-marketing handoff systems
- All other services and the full sitemap from the companion PRD remain unchanged and apply here.

Why Automation + CRM matter for the "superior architecture" argument

A pure creative studio's site stops at "we made you a beautiful ad." A **Creative Intelligence Studio** site proves the intelligence closes the loop: ad → lead → CRM → automated nurture → sale. This single addition is what separates LINEX from Buck, Runway-style AI studios, or traditional agencies — and it's a genuine structural advantage worth making visible in the IA (its own service pages, its own case-study callouts, its own icon in the "Why LINEX" comparison block).

2. Navigation Structure (recommended)

Header (sticky, glass-blurred on scroll): `Work` · `Services` · `Industries` · `Studio` (About) · `Journal` (Blog) · `Events` — `Start a Project` (primary CTA button, always right-aligned)

Naming note: "Work" instead of "Portfolio," "Studio" instead of "About," "Journal" instead of "Blog," and "Start a Project" instead of "Book a Call" — these are deliberate editorial-studio naming choices (Buck, Ueno, Instrument-style) that reinforce the Creative Intelligence positioning over a conventional agency vocabulary. Use these labels in nav/UI chrome; the underlying URLs from the companion PRD (`/portfolio`, `/about`, `/blog`, `/book-a-call`) don't need to change — only the visible label.

Footer structure (4-column mega-footer):

Column 1: Studio	Column 2: Work	Column 3: Services	Column 4: Resources
About	Portfolio (all)	Creative Strategy	Journal (Blog)
Team	Case Studies	AI Commercial Production	Prompt Library
Careers	Industries	Digital Marketing	Templates
Contact	Events	Web Design	Free Audit

Bottom bar: logo · social icons (Instagram, LinkedIn, YouTube, X) · newsletter input · legal links (Privacy, Terms) · "Bangalore · Global" location tag.

3. Homepage — Full Text Wireframe

Every section below specifies: **Headline** · **Subheadline** · **Supporting copy** · **Suggested media** · **Suggested interaction** · **Primary CTA** · **Secondary CTA** · **Layout** · **Animation** · **Visual direction**.

Section 1 — Hero

- **Headline:** "Where creativity meets intelligence."
- **Subheadline:** "LINEX Studios is a Creative Intelligence Studio — we design, generate, and scale commercials, campaigns, and growth systems for brands that refuse to look ordinary."
- **Supporting copy:** none (hero stays uncluttered — two lines max)
- **Media:** Full-bleed looping AI-generated cinematic showreel, muted autoplay, 10-14s loop, subtle color grade shift on loop restart
- **Interaction:** Cursor-aware spotlight/vignette effect following mouse over the video; scroll-linked slow zoom-out on the video as user begins scrolling
- **Primary CTA:** Start a Project
- **Secondary CTA:** Watch the Reel (opens fullscreen lightbox)
- **Layout:** Full-viewport height, centered type over video, CTAs bottom-third
- **Animation:** Headline mask-reveal (letters clip-path in from bottom, 600ms stagger), CTA buttons fade in last
- **Visual direction:** Near-black canvas (■ #0A0A0B), high-contrast white type, no gradient overlay competing with the video — let the footage carry the premium feeling

Section 2 — Trust Strip

- **Headline:** (none — label only) "TRUSTED BY AMBITIOUS BRANDS"
- **Media:** Grayscale logo marquee, brightens to full color on hover
- **Interaction:** Continuous horizontal auto-scroll, pauses on hover
- **Layout:** Full-width thin strip, generous vertical padding (creates breathing room after the dense hero)

- **Visual direction:** Minimal, logo-only, no CTA in this section — it's a pure trust beat, not a conversion beat

Section 3 — The Studio Thesis (positioning statement)

- **Headline:** "We don't automate creativity. We amplify it."
- **Subheadline:** (none)
- **Supporting copy:** "Every commercial starts with a strategist, not a prompt. Intelligence — human and artificial — works together at every stage, from positioning to pixel."
- **Media:** None or a single subtle looping abstract visual (particle/neural motif, tasteful, not literal "AI cliché" imagery)
- **Interaction:** Text mask-reveal as user scrolls into view
- **Layout:** Centered, large editorial type (48–64px), max-width constrained to ~800px for readability — this is the "manifesto" beat
- **Visual direction:** Maximum restraint — this section should feel like a pause, not a pitch

Section 4 — Capabilities Grid

- **Headline:** "One studio. Every discipline your brand needs."
- **Content:** Bento-style asymmetric grid of core services (Creative Strategy, AI Commercial Production, AI Product Photography, AI Fashion Campaigns, Brand Films, Digital Marketing, Web Design, Automation/CRM) — each card: icon, name, one-line descriptor, subtle looping visual on hover
- **Media:** Each card has a short (2–3s) looping visual example specific to that discipline
- **Interaction:** Cards lift + visual auto-plays on hover; tapping/clicking navigates to the service page
- **Primary CTA:** (per-card) [Explore →](#)
- **Secondary CTA:** none at section level
- **Layout:** Bento grid, 2–3 larger "hero" cards (Creative Strategy, AI Commercial Production) mixed with smaller supporting cards
- **Animation:** Staggered entrance (80–100ms per card) as grid scrolls into view
- **Visual direction:** This is the densest section visually — use it to show range without feeling like a directory

Section 5 — Featured Work

- **Headline:** "Recent work"
- **Content:** 4–6 large video-forward project cards, hover-to-play
- **Media:** Full project showreels (not just thumbnails) — this section should feel like a mini cinema
- **Interaction:** Hover autoplay with sound-off; click opens full cinematic project page (see companion PRD Section 5.6 for the project detail template)

- **Primary CTA:** [View all work](#)
- **Layout:** Large-format 2-column or asymmetric masonry, generous gutters
- **Animation:** Parallax on scroll (cards move at slightly different scroll speeds for depth)
- **Visual direction:** Let the work fill the frame — minimal chrome, no heavy card borders

Section 6 — Results / Proof

- **Headline:** "Creative that's built to perform."
- **Content:** 3 stat-led case study callouts (e.g. "312% increase in ROAS," "4.2M organic views," "61% lower CAC")
- **Media:** Small supporting visual per stat (client logo + a still frame)
- **Interaction:** Numbers animate/count up when scrolled into view
- **Primary CTA:** [Read the case study](#) (per card)
- **Layout:** 3-column on desktop, stacked on mobile
- **Visual direction:** This is the section that reassures the performance-minded buyer that "premium" and "provable" aren't in tension

Section 7 — Process

- **Headline:** "How we work"
- **Content:** 5-step horizontal timeline — [Strategy → Direction → Generation → Craft → Scale](#)
- **Media:** Small icon or looping micro-animation per step
- **Interaction:** Horizontal scroll-scrub on desktop (steps advance as user scrolls), simple vertical stack on mobile
- **Layout:** Full-width horizontal timeline with sticky section header
- **Visual direction:** Precise, technical-feeling typography here (mono or semi-mono accents) — signals "system," contrasting with the more editorial hero/thesis sections

Section 8 — Why LINEX (comparison)

- **Headline:** "Not an agency. Not a tool. A studio built different."
- **Content:** 3-column comparison — LINEX Studios vs. Traditional Agency vs. DIY AI Tools — across axes: Speed, Creative Quality, Strategic Depth, Scalability
- **Media:** none — this is a pure information/table section
- **Interaction:** Row highlight on hover
- **Layout:** Comparison table, LINEX column visually emphasized (subtle glow/border)
- **Visual direction:** Clean, confident, slightly technical — this section does the "objection handling" work of a sales deck, on the page

Section 9 — Industries Strip

- **Headline:** "Built for brands that move."
- **Content:** Horizontal scroll of 12 industry chips (Fashion, Jewellery, Luxury, Fitness, Healthcare, Real Estate, Restaurants, Hotels, Technology, Education, Beauty, Automotive)
- **Interaction:** Horizontal drag/swipe carousel
- **Primary CTA:** per-chip, links to `/industries/[slug]`
- **Layout:** Full-width horizontal scroller, no pagination dots (feels endless/abundant)

Section 10 — Testimonials

- **Headline:** "What founders say"
- **Content:** Auto-rotating carousel, 1 quote at a time, name/title/company/photo
- **Interaction:** Auto-advance every 6s, manual swipe/arrow override
- **Layout:** Centered, single large quote, generous whitespace
- **Visual direction:** Largest type of any body-copy section on the page — testimonials should feel like a spotlight moment, not a footnote

Section 11 — Journal (Blog) Preview

- **Headline:** "From the Journal"
- **Content:** 3 most recent posts
- **Primary CTA:** `Read the Journal`
- **Layout:** 3-card row, image-forward

Section 12 — Events Preview

- **Headline:** "Where we'll be"
- **Content:** 3 nearest upcoming events (city-aware if geolocation available)
- **Primary CTA:** `See all events`
- **Layout:** 3-card row, date-forward card design (large date block, event name, city tag)

Section 13 — Final CTA

- **Headline:** "Let's build something the internet hasn't seen yet."
- **Subheadline:** "Tell us what you're building. We'll tell you how fast we can make it real."
- **Media:** Full-width gradient or dark abstract background, optional subtle looping particle/light motion
- **Primary CTA:** `Start a Project`
- **Secondary CTA:** `Or say hello on WhatsApp`
- **Layout:** Full-width band, centered, maximum visual weight on the button
- **Animation:** Button has a magnetic-cursor hover effect — the single richest micro-interaction on the page, reserved for the final conversion moment

Section 14 — Footer

- Per Section 2 nav structure above; includes newsletter capture input inline.

4. Visual Design System

4.1 Typography

- **Display face:** A geometric/grotesk sans in the family of Neue Montreal, General Sans, or Söhne — used for H1/H2, large and confident, tight tracking (-1% to -2%)
- **Body face:** A highly legible humanist sans (e.g. Inter, Suisse Intl) at 16-18px base, 1.5-1.6 line-height
- **Accent/technical face:** A monospace (e.g. JetBrains Mono, IBM Plex Mono) used sparingly — process steps, stat labels, code-like microcopy — reinforces the "intelligence/system" half of the positioning
- **Type scale (desktop):** H1 72-120px / H2 48-64px / H3 32-40px / Body 16-18px / Small/Label 12-13px (uppercase, letter-spaced)
- **Mobile scale:** roughly 55-60% of desktop for display sizes, body stays ~16px minimum for readability

4.2 Color hierarchy

Role	Value (example)	Usage
Base canvas	#0A0A0B	Primary background
Elevated surface	#141416	Cards, modals
Border/hairline	#232326	Dividers, card borders
Primary text	#F5F5F7	Headlines, body
Secondary text	#9A9AA2	Subheads, captions
Accent gradient (primary)	#5B5FEF → #22D3EE (indigo → cyan)	CTAs, links, active states, stat highlights
Accent gradient (alt, sparing)	#F97316 → #EF4444 (warm)	Reserved for rare "urgent" moments only (e.g. limited event countdown) — never mixed with primary accent on the same screen
Success/positive	#34D399	Case study stat highlights only

Color rule: Accent gradient appears on no more than ~10% of any given viewport — it marks *action* and *emphasis*, never decoration.

4.3 Spacing system

8px base unit. Scale: (4 · 8 · 16 · 24 · 32 · 48 · 64 · 96 · 128 · 192px). Section vertical padding defaults to (128px) desktop / (64px) mobile between major homepage sections — generous negative space is a core premium signal, don't compress it to fit "more" above the fold.

4.4 Grid system

12-column grid, max content width (1440px), gutters (24px) desktop / (16px) mobile, outer margin (80px) desktop / (20px) mobile. Bento/asymmetric grids (Capabilities, Results) break the strict 12-col grid intentionally for visual interest but always align to the same gutter rhythm.

4.5 Card styles

- **Default card:** (12px) radius, (1px) hairline border ((● #232326)), background (● #141416), subtle inner glow on hover (accent gradient at 8% opacity), (24–32px) internal padding
- **Video/project card:** No border, radius (8px), media fills card fully, gradient scrim ((black 0% → transparent 40%)) at bottom for text legibility over video
- **Stat card:** Larger radius ((16px)), number in display face at 56–72px, label in mono/label style beneath

4.6 Button styles

- **Primary:** Gradient fill ((#5B5FEF → #22D3EE)), (8px) radius, white text, magnetic-hover effect (button subtly follows cursor within a small radius), scale (1.02) on hover
- **Secondary (ghost):** Transparent fill, (1px) white/30% border, fills to white/10% on hover
- **Tertiary (text link):** Underline-on-hover only, accent-gradient text color
- All buttons: (200ms ease-out) transition on all hover states, minimum 44px tap target on mobile

4.7 Iconography

Thin-stroke (1.5px), geometric, monochrome by default (inherits text color), switches to accent-gradient fill only in active/selected states (e.g. active nav item, selected filter chip). Recommend a single consistent icon set (e.g. Phosphor or a custom-drawn set) rather than mixing icon libraries.

4.8 Illustration style

Minimal-to-none as literal illustration — LINEX's visual language should be **photographic/cinematic (AI-generated) and abstract-motion (particles, gradients, light)**, not flat illustration or line-art mascots. Where a diagram is needed (e.g. Process section), prefer clean geometric/technical diagrams in the mono-accent style over decorative illustration — this keeps the "intelligence" half of the brand credible rather than cartoonish.

4.9 Photography / video style

- **Tone:** Cinematic, high-contrast, shallow depth of field, subtle film grain overlay (2-4% opacity) even on fully AI-generated footage — signals crafted, not raw-generated
- **Color grading:** Desaturated base with one controlled accent color pop per shot (ties back to brand gradient family)
- **Motion:** Slow, deliberate camera movement (dolly/push-in) rather than fast cuts — reinforces "premium" pacing; fast cuts reserved only for social-cutdown deliverables, never for the site's own hero/brand footage
- **No stock photography, ever** — every visual on the site should read as either bespoke AI-generated work or real studio/team photography

4.10 Micro-interactions summary

Magnetic buttons on primary CTAs · cursor-aware hover states on hero video and project cards · scroll-scrubbed horizontal timeline (Process section) · animated counters (stats) · text mask-reveal on scroll (thesis, about, case study intros) · card lift + autoplay on hover (capabilities, portfolio) · smooth 200-300ms crossfade page transitions · sticky glass-blur header that condenses (reduces height) after 80px scroll.

5. Portfolio — Cinematic Project Template (delta from v1)

The companion PRD's project template (Overview · Challenge · Approach · Storyboard · Final Output · Tools Used · Results) still stands. This brief asks specifically for a **Strategy** step and a more explicit **Creative Process** beat — refine the template to:

Hero → Overview → Challenge → Strategy → Storyboard → Creative Process → Final
Commercial → Tools Used → Outcome → Related Projects

What's new: inserting **Strategy** between Challenge and Storyboard makes the strategic-thinking step visible before the craft steps — this is the single highest-leverage change for the "Creative Intelligence" positioning, since it proves every project starts with reasoning, not a prompt. Each project page should open its Strategy block with 2-3 sentences answering: *what was the insight that shaped the creative direction?*

Hero of each project page: full-bleed video with project name + one-line outcome overlay (e.g. "Aetherwear — 312% ROAS increase"), matching the homepage hero's visual language for consistency.

Related Projects: 3 cards at the bottom, filtered by shared industry or service tag — never random, always relevant.

6. Why This Architecture Is Superior to a Traditional Agency Website

Traditional agency site	LINEX Studios architecture	Why it wins
Single generic "Services" page listing everything	Dedicated landing page per service (16+ pages)	Each page can rank for its own keyword cluster and speak directly to that buyer's problem — 16x the organic surface area, and every page can be individually cited by AI search engines for its specific topic
"Portfolio" = static image gallery	Cinematic project pages with Strategy, Process, and Outcome	Proves <i>thinking</i> , not just output — directly counters the "AI = cheap/generic" objection before it's raised
Blog exists but is thin/inconsistent	14-category Journal with pillar/cluster SEO+GEO/AEO structure	Becomes both an SEO asset and an AI-search citation asset — most agency blogs are never structured for either
No community/events presence	Dedicated, geographically-focused Events Hub	Converts LINEX from "vendor" to "ecosystem player" — a durable trust/authority asset competitors can't easily replicate, and a compounding local-SEO + backlink source
One generic contact form	Two intent-matched conversion paths (Book/Start a Project vs. WhatsApp) + free audit + newsletter	Matches conversion mechanism to buyer readiness instead of forcing every visitor through the same high-friction form
Visual design is templated/stock-heavy	Full custom design system (Section 4) with a distinct visual grammar (cinematic + technical-mono accents)	Visual distinctiveness <i>is</i> the product demo — a creative studio's own site is its strongest portfolio piece; a templated site actively undermines the sales pitch
Site is a static brochure	IA built for extensibility (Academy, Community, Tool Directory, Podcast, Marketplace — see companion PRD Section 11)	Site scales into a media/platform asset over 2-3 years instead of needing a rebuild — compounding SEO/GEO authority rather than resetting it

How each layer contributes to the stated goals:

- **Trust (30-second rule):** Hero + Trust Strip + Thesis section (Sections 1–3) are sequenced to build trust before any pitch — visual proof, then social proof, then philosophy, in that order, before a single feature is mentioned.
 - **Authority:** The Journal + Events Hub + deep service pages together create a body of public, citable expertise no single "About Us" paragraph could achieve.
 - **SEO:** Every service, industry, and blog post is its own indexable, internally-linked URL (see companion PRD Section 7) rather than one page trying to rank for 50 keywords at once.
 - **AI Search (GEO/AEO):** FAQ schema on every service page, answer-first blog structure, and dedicated GEO/AEO service pages make LINEX simultaneously a *practitioner and a case study* of the discipline it sells — the strongest possible credibility loop.
 - **Lead generation:** Multiple intent-matched CTAs (Start a Project, WhatsApp, Free Audit, Newsletter) instead of one generic form capture visitors at every readiness stage, not just the most sales-ready ones.
 - **Brand perception:** The design system (Section 4) is deliberately distinct from typical dark-mode-SaaS templates — the mono/technical accent paired with cinematic imagery creates a *recognizable* visual signature, which matters because "premium and minimal" alone is now a commodity aesthetic; specificity is what's actually memorable.
 - **Conversion:** Section 9 of the companion PRD's conversion mechanisms are layered directly into the homepage wireframe here (Section 3) rather than bolted on — CTAs appear at natural decision points (after proof, after process, after objection-handling), not just at the top and bottom.
 - **Long-term scalability:** Every new content type (Academy, Podcast, Tool Directory, etc.) reuses existing components and data models (companion PRD Section 11) — growth doesn't require re-architecture, only re-population.
-

7. Handoff Notes

- This document extends, not replaces, `LINEX_STUDIOS_Website_PRD.md`. Use the companion PRD for: full sitemap, individual service/industry/blog/events page specs, SEO/schema plan, 100 blog ideas, and the Events Hub data model.
- Use this document for: updated positioning language, homepage wireframe copy, and the full visual design system.
- Before development begins, reconcile the two navigation label sets — this document recommends editorial labels (*Work, Studio, Journal, Start a Project*) as the user-facing nav copy; the underlying routes/slugs from the companion PRD do not need to change.

End of document.
